Sudbury, Ontario, Canada

Summary

Data Analyst with an MS in Computational Sciences and hands-on experience delivering end-to-end analytics solutions across Python, Power BI, and Snowflake. Skilled in Advanced SQL, DAX modelling, EDA, and feature engineering - with production dashboards published to Power BI Service and statistical preprocessing applied to real transactional datasets. Translates complex data into clear, business-ready narratives that help stakeholders make faster, more confident decisions.

Technical Skills

Languages : Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, Java

SQL & Databases : Microsoft SQL Server, CTEs, Window Functions, CASE

Power BI & DAX : Power BI Desktop & Service, DAX: CALCULATE, SUMX, AVERAGEX, MEDIANX, ALLEXCEPT, FILTER, COUNTROWS, DIVIDE, RANKX, SWITCH, ISBLANK, YOY & YTD time intelligence, Power Query, Star Schema

Cloud & Data Warehousing : AWS, Snowflake, Azure

Analytics : EDA, Feature Engineering, Statistics (sampling, imputation, outlier detection, skewness, median/mode), Data Validation & Profiling, Excel (Pivot Tables, XLOOKUP, SUMIF, COUNTIFS, conditional formatting, dashboards)

Version Control : Git, Github

Work Experience

WoulibX - Ride Sharing Platform

Jan 2025 - May 2025

Data Analyst Intern

Remote - Montreal, Quebec

- Performed EDA on ride-sharing datasets using Python (Pandas, NumPy) uncovering usage patterns and chatbot response accuracy issues, driving targeted data quality improvements.
- Built Power BI dashboards tracking KPIs (ride completion rate, query resolution, user retention) using DAX measures, calculated columns, and a star-schema model.
- Wrote complex SQL queries - CTEs, window functions (ROWNUMBER, RANK, LAG), GROUP BY, HAVING - transforming operational data into reporting layers, replacing manual Excel workflows.
- Applied statistical preprocessing (outlier detection, missing-value imputation, distribution analysis) to raw transactional data; engineered features for churn analysis using correlation heatmaps and Seaborn plots.

Academic Projects

End-to-End Power BI Loan Analytics Dashboard

2026

- Data Source: Power BI Dataflow (Azure), Domain: Lending & Financial Analytics, Published to Power BI Service with scheduled & incremental refresh
- Ingested raw loan data from SQL Server into an Azure Dataflow pipeline, profiling and restructuring it in Power Query so the downstream model was clean enough to trust before any analysis began.
- Built DAX measures that answered specific business questions - default rates by employment type, year-over-year loan volume shifts, and how credit score interacts with repayment behaviour across age groups.
- Designed an interactive multi-page report with dynamic segmentation so a credit manager could slice by borrower profile without waiting on the analyst team for every new cut of data.
- Configured incremental and scheduled Dataflow refresh so the dashboard stayed current automatically - turning a one-time analysis into a persistent decision-making tool.

Education

Laurentian University

Msc in Computational Sciences, GPA : 3.8/4.0

Sep 2023 - May 2025

Ontario, Canada

Vasantdada Patil Pratisthan's College of Engineering & Visual Arts

Bachelor of Engineering in Computer Engineering, GPA: 3.0/4.0

Jul 2017 - Jun 2021

Mumbai, India
